

Brief Introduction to the Operational Energy-Saving Plan for Baidu Buildings, Equipment and Facilities

For the purpose of saving energy through reducing energy waste by implementing management measures while guaranteeing the normal work and life of personnel with the existing equipment, and improving the efficiency of energy use of equipment through increasing the work efficiency via methods such as optimized operation plans without affecting the normal operation of equipment, Baidu has formulated the *Operational Energy-Saving Plan for Baidu Buildings, Equipment and Facilities*.

The plan encompasses provisions on the energy-saving operation of central air-conditioning systems in summer, management of lighting facilities, elevator and escalator operations, toilets, landscape pools, tap water, hot water, power supply and distribution, etc.
